Expertise

- C language
- Python
- ReactJS
- NodeJS
- Javascript
- Typescript
- MySQL
- HTML
- CSS
- OOD
- Arduino
- Java

Language

- English
- Hindi
- Telugu
- Tamil
- Kannada
- Sanskrit

Newbie graduate with full enthusiasm in computer applications, ready to dive into the tech jungle. fascinated about emerging tech and known to be the life of the coding party. I am a superb Team player, with communication skills sharper than a well-commented code. I can't wait to share my knowledge and excitement with everyone and want to make a good impact!

Experience

Xecutables 1st sept 2023 - Present
Software Developer Intern

The Job is to Develop Physical Access Management System using ReactJS framework and MySQL

Projects

Accident Detection System

This project uses Arduino uno, GSM module and Vibration sensor as the main components to detect the drastic change in the Axis to detect the accident and with the help of the GSM we can send the accurate location of the accident occurred location and also make a call. The detailed representation and demo video can be viewed in the provided GitHub link.

[https://github.com/bandidhanush/AccidentDetectionSystem]

Realistic-Handwriter

The programming language used in this project is Python, This follows the Object Oriented paradigm. The conversion of a word document to text is done through multiple levels of abstraction. This allows the program to tackle arrangement and conversion problems at the stages where they are encountered. Inheritance is used to avoid multiple instances of the same data members through objects of each layer, a data member is thus initialized only once, saving memory

Hobbies

- Playing Guitar
- Training My pet dog
- playing console games
- Enjoy playing Badminton
- Brainstroming session of Chess
- Watching Lots and Lots of movies and analyzing them

Education

Present
Dayananda Sagar University
**Bachelore's of
Computer Application**

2021
Emeralds Junior College
**Math,Economics,
Commerce**

2018

Music Player Using Java

Music player using Java is an easy to understand vintage mp3 player with the ability to play specific mp3 files, pause, resume, and stop the music. Every kind of user uses the music player on a daily basis. Music stimulates life, clears the mind, and improves mental clarity for its listeners. This project is majorly created to get hang of the Java programing language and try things in Java.

Automatic Fan Speed Controller

The Automatic Fan Speed Control system has a wide range of applications in different fields. This system can be used in Store Rooms, Server Room, Industry, and laboratory, as well as it can be used in our Room and Offices. This device controls the fan speed according to the room temperature. Whenever the room temperature is increased, the fan speed is also increasing Automatically. And when the temperature is decreased, the fan speed also decreased automatically. In this way, this system controls the temperature using the temperature sensor

- Conducted a Technical Fest Event as organizer
- I am also a Coordinator for Coders Club

- Participated in College level Advertisement making competition and won it
- I also secured second position in inter college Chess tournament

- Won national level Kabbadi tournament and was the player of the tournament.
- Won district level football tournament.
- I was also the School Pupil Leader for two Consecutive years
